Abstract: In the title compound, C₁₈H₁₉N₃O₅, the 3,6-dihydro-2*H*-pyran ring adopts a half-chair, distorted towards a half-boat, conformation with $Q_T = 0.5276(14)$ Å. The benzene ring is twisted out of the plane of the triazole ring [dihedral angle = 23.54 (8)°]. In the crystal, supramolecular layers in the *ac* plane are formed through C-H...O and C-H...N(triazole) interactions. These stack along the *b* axis being connected by C-H...N contacts.
